Professional Summary

B.Tech IT student at NIT Jalandhar (CGPA 8.65) with hands-on experience in cloud and network security: built an Azure honeypot and Microsoft Sentinel SIEM pipeline that captured 34,000+ attack events, analysed with KQL. Strong in TCP/IP, DNS, TLS and Wireshark (NPTEL Networking, Top 1%) with 400+ DSA problems solved. Core member of Cybernauts Society, with strong teamwork, communication and leadership skills.

Technical Skills

- **Languages:** C++, C, Python, JavaScript, SQL, KQL
- **Networking & Security:** TCP/IP, UDP, HTTP/HTTPS, DNS, TLS/SSL, Wireshark, Cisco Packet Tracer, SIEM, Windows Event Logs, NSG, GeoIP Enrichment
- **Cloud & Tools:** Microsoft Azure, Microsoft Sentinel, Log Analytics, Azure Monitor Agent, Linux/Bash, Git, GitHub
- **Core CS:** Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, Cryptography
- **Web & ML:** React.js, Node.js, Express.js, REST APIs, FastAPI, PostgreSQL, MongoDB, Tailwind CSS, Scikit-Learn, XGBoost, Pandas, NumPy

Projects

Threat Radar Azure – Cloud Honeypot & SIEM Lab GitHub
Microsoft Azure, Microsoft Sentinel, Log Analytics, Azure Monitor Agent, KQL

- Deployed an intentionally exposed Windows VM honeypot in a disposable Azure environment (open NSG, firewall off) and captured **34,000+ failed logon events** (Event ID 4625) within about two days.
- Built a centralized log pipeline: Azure Monitor Agent and Data Collection Rule → Log Analytics Workspace → Microsoft Sentinel (Windows Security Events via AMA).
- Wrote KQL queries to find top attacking IPs and most targeted accounts (Administrator, Admin, Administrador), showing a few sources drove most automated brute-force attempts.
- Enriched events with a GeoIP watchlist (∼55,000 rows) using `ipv4_lookup` and built a Sentinel Workbook attack map; one location accounted for ∼48% of 1,095 mapped logons.

NoWay – Commercial Real Estate Platform & Valuation Microservice GitHub
MERN Stack, Python, FastAPI, XGBoost, Mapbox

- Built a full-stack commercial real estate portal with multi-attribute filters and Mapbox geo-search.
- Built and deployed an XGBoost valuation microservice (FastAPI) that predicts fair market property values via REST APIs.
- Implemented role-based access control (Buyer/Broker/Admin), lead capture and saved-search email alerts.

LogiFleet – Fleet & Logistics Management System GitHub
Team Project – Frontend Developer: React.js, Tailwind CSS, Recharts, Node.js, PostgreSQL

- Built responsive dashboards with Recharts for fleet health, asset utilisation and operational expenses.
- Implemented JWT auth via Axios interceptors, role-guarded routes and CSV export for analytics, coordinating with the backend team on API contracts.

Education

Dr. B.R. Ambedkar National Institute of Technology, Jalandhar July 2024 – May 2028
B.Tech in Information Technology **CGPA: 8.65**
Relevant Coursework: Operating Systems, Computer Networks, Cryptography, DBMS, Data Structures & Algorithms

Patel Public School, Rajpura (CBSE) – Class XII, Science March 2023 | **97%**

Achievements & Leadership

- Solved **400+ DSA problems** on LeetCode with a **1600+ contest rating**.
- **Core Member, Cybernauts Society:** organised flagship technical events *This Should Work* and *CodeBid*.
- Qualified for the **Amazon ML Summer School 2026** selection test; ranked **9th of 126** in the IT department.

Certifications

- **NPTEL (IIT Bombay) – Demystifying Networking:** Elite + Top 1% (Score: **88%**) [Certificate]
